PROBLEM

- Pollution caused by litter is a serious issue that harms the environment and makes communities look unclean.
- It can lead to health problems by attracting pests and spreading bacteria.
- The problem is often caused by carelessness or a lack of proper trash disposal, affecting both people and wildlife.

The background features a stylized landscape. At the top left is a bright yellow sun. To the right is a white, fluffy cloud with a single green leaf. The middle section contains the title 'OUR SOLUTION' in large green letters. Below the title is a bulleted list of three items. The bottom section shows a green field with a winding path, a single green leaf, a blue rock, and several small yellow flowers with white centers.

OUR SOLUTION

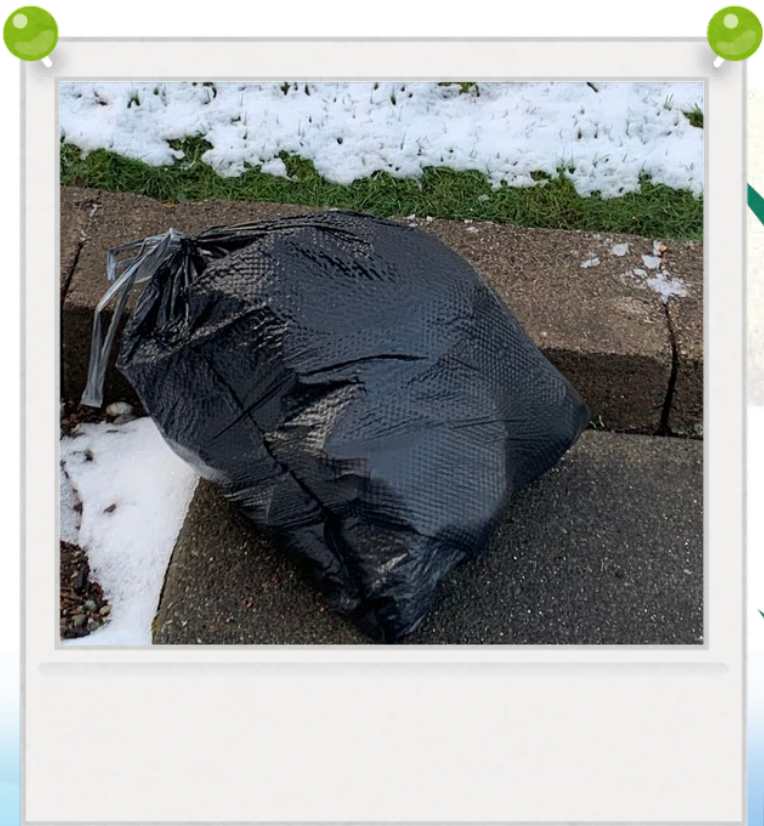

- Our group chose to clean our neighborhoods because it is simple, realistic, and lets everyone contribute.
- We did cleanups individually or in small groups, stayed safe, and disposed of trash properly.
- Other solutions include adding more trash bins, organizing cleanups, and educating people about litter.

OUTCOME

- Project went well everyone cleaned their own neighborhood
- Would've been even better with more people helping
- Still showed small actions can make a difference

THANK
YOU
